Application/Control Number: 09/940479

Art Unit: 1754

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1,6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sasaki '514.

Sasaki suggests the instantly claimed process of mixing an acidic titanium compound, eg. titanic acid powder, with an organic amine to form a sol which is then calcined to titanium oxide. See col. 2.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to select the portion of the prior art's range which is within the range of applicant's claims because it has been held to be obvious to select a value in a known range by optimization for the best results, see In re Boesch, 205 USPQ 215.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness, In re Malagari, 182 USPQ 549.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Watanabe '460.

Application/Control Number: 09/940479

Art Unit: 1754

Watanabe suggests the instantly claimed process of mixing an acidic titanium compound, eg. titanyl sulfate or titanium oxysulfate, with an amine and then calcining the precipitate that is formed to titanium oxide. See cols. 5,13,14.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to select the portion of the prior art's range which is within the range of applicant's claims because it has been held to be obvious to select a value in a known range by optimization for the best results, see In re Boesch, 205 USPQ 215.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness, In re Malagari, 182 USPQ 549.

Claims 1-4,6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sasaki '514 in view of Watanabe '460.

Sasaki suggests the instantly claimed process but may differ in not stating the instantly claimed amines.

Watanabe suggests a similar process as Sasaki and teaches the use of the instantly claimed amines.

Application/Control Number: 09/940479

.

Art Unit: 1754

It would have been obvious to one skilled in the art to use the amines taught by Watanabe in the process of Sasaki because Sasaki requires organic amines and Watanabe teaches the use of organic amines in a similar process of making titanium oxide.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to select the portion of the prior art's range which is within the range of applicant's claims because it has been held to be obvious to select a value in a known range by optimization for the best results, see In re Boesch, 205 USPQ 215.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness, In re Malagari, 182 USPQ 549.

Claims 1,6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kanezaki et al.

Kanezaki suggests the instantly claimed process of mixing titanium chloride with urea,
which would appear to be an organic nitrogen containing basic compound, to form a powder
which is then calcined. See the abstract and results on pg. 3583.

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
